Digital Literacy Project Report

CSE0001-Digital Literacy

Name: Apoorva Ojha

Registration no: 25BCY10099

Branch: Computer Science Engineering (Cyber Security & Digital Forensics)

Year: First Year

Course code: CSE0001

Date: 30th March 2026

INTRODUCTION

In the current academic environment, digital literacy has moved beyond the realm of simply a competitive advantage; it has become a foundational requirement to ensure success in academics and, ultimately, to sustain a lifelong professional career.

As a newly appointed Student Digital Ambassador, my primary mandate is to act as a conduit to assist my fellow students in transitioning from internet consumption to professional digital literacy. This portfolio represents my first official assignment to assist my batch in successfully traversing the intricacies of the modern digital world. As I progressed throughout this assignment, I have developed a comprehensive resource base that meets the fundamental requirements of a successful career in the modern world.

This included creating impactful visual aids to promote digital awareness, establishing a verified professional profile on platforms such as LinkedIn and GitHub, and researching critical cybersecurity threats to ensure that my batchmates have a productive and secure digital experience. This report will act as a roadmap to promote digital citizenship to ensure a productive and secure digital experience for all students in our academic environment.

Task 1: Digital Literacy Awareness Infographic

For this task, I used Canva to design an infographic on a single page. My design includes three specific pillars: What Digital Literacy Is, Safe Internet Practices, and Email Etiquette. The design is in a simple and modern style with distinct sections for each pillar. The 'What is it?' pillar includes an explanation of literacy in terms of critical evaluation and content creation. The 'Safety' pillar includes information on Multi-Factor Authentication and digital footprints. Finally, there is a quick checklist on Email Etiquette in the 'Email' pillar. Reflection: One thing I found interesting was how to distill data into five-second sound bites on complex topics like cybersecurity in a way that would interest students.

Task 2: Build Your Student Digital Portfolio

I have created digital profiles on GitHub, LinkedIn, and Kaggle.

> **GitHub: I created a profile README that includes an introduction about myself, branch, year, and learning goals.**

LinkedIn: I have updated my education profile to include my current degree at VIT Bhopal.

Kaggle: Set up an account to explore data science and machine learning communities.

Reflection: These platforms will be my digital resume over the next four years.

I plan on using GitHub to host my coding projects and LinkedIn to network with professionals in my industry

Task 3: Explore Coding & Collaboration Platforms

This task involved exploring various platforms required for academic collaboration and coding practice.

Part A: For this part, I completed a beginner-level Python coding problem on HackerRank. This helped me get accustomed to coding platforms used by various organizations for coding assessments.

Part B: For this part, I created a Google Form titled "Digital Literacy Awareness Quiz" consisting of five questions in various forms such as multiple-choice questions and short-answer questions.

Reflection: Through this task, I learned how data collection can be easily facilitated through cloud collaboration platforms such as Google Forms, which can be useful for me as an Ambassador to test the digital awareness of my batch.

Task 4: Draft a Professional Email & Etiquette Guide

Effective communication is the basis of professional relationships.

Part A: I wrote two different emails, one asking for an extension on an assignment from a professor, while the other communicated interest in an internship position to a coordinator. I made sure to follow strict guidelines with regards to email subject lines, greetings, and structure.

Part B: I designed a checklist titled "Social Media Do’s & Don’ts" where I emphasized the need for privacy settings and positive online discourse.

Reflection: I found an instance where an unprofessional email resulted in an opportunity for an internship position being lost due to an unclear subject line and an informal tone. This shows that digital communication is often the first impression we give to the world.

Task 5: Cybercrime Awareness Case Study & Prevention

As an Ambassador, I am also expected to assist in ensuring that people do not become victims of cybercrime.

> **Part A: I conducted a case study on the crime of Phishing. The case study outlines how this crime is conducted, the process followed in carrying out the crime, and the financial impact of this crime on the victim.**
>
> **Part B: I have come up with a checklist of how to stay safe online, consisting of eight steps. This ranges from using different passwords to using UPI safety features and reporting the crime to the National Cyber Crime Portal (1930).**

Reflection: The most surprising thing I have learned is how sophisticated the templates of phishing emails have become, resembling exactly the banking websites. I have personally vowed not to click on any link in an SMS.

Conclusion

This project has provided me with a wide range of skills that will enable me to become a successful Student Digital Ambassador. From learning how to be professional to learning how cybercrime works, I am now ready to assist my fellow students in becoming better and safer digital citizens.
